Windows 7 Internet Sharing for BeagleBone Black

I wish I better understood WHY this was *necessary*.

At one point my BBB "just worked". When it was plugged into my desktop computer via USB (Windows 7 machine) the BBB had internet connectivity just fine. After working to solve other issues it stopped. In any case, it works again with the following steps:

On the Windows 7 computer:

- Control Panel -> Network and Internet -> Network Connections
- Right-click your internet connection, Properties, Sharing Tab
- Click "Allow other network users to connect thru this computer's Internet connection"
- Select the BeagleBone Black's network connection under "Home networking connection:"
- Click OK.

Here's the trick: when I did this, Windows assigned a static IP to the BBB connection. Why? No idea.

You have to go back to that connection and reset it to DHCP.

- Control Panel -> Network and Internet -> Network Connections
- Right-click the BeagleBone Black's connection, Properties
- Click Internet Protocol Version 4 (TCP/IPv4), Click Properties
- Click "Obtain an IP address automatically"
- Click "Obtain DNS server address automatically"
- Click OK. Click CLOSE.

[View my complete profile](#)

On the BBB:

This makes the BBB route internet traffic thru the host (Windows 7 in this case) and DNS thru Google's DNS Servers (8.8.8.8).

```
route add default gw 192.168.7.1
echo "nameserver 8.8.8.8" >> /etc/resolv.conf
```

Try It:

```
ping www.google.com
```

Make it Persistent:

To make this "stick" after a reboot of the BBB, you need to add these commands to the ethernet startup script on the BBB (/usr/bin/g-ether-load.sh).

NOTE: You CANNOT simply add these commands to the bottom of that script file. They must go before the udhcpd starts. It does not return control to the script so adding them at the bottom of the file does nothing for you. My script file now looks like this:

```
/sbin/ifconfig usb0 192.168.7.2 netmask 255.255.255.252
/sbin/route add default gw 192.168.7.1
echo 'nameserver 8.8.8.8' >> /etc/resolv.conf

/usr/sbin/udhcpd -f -S /etc/udhcpd.conf
```

IT WORKS!

A big thanks to robert@rplural.net who got me moving in the right direction. Read his description of the parallel steps for a Linux host! (<http://www.rplural.net/BlackNetworking>)

Can we do this on Windows vista.?

I have USB 3G connection & Vista / Ubuntu 12. Please post procedure to share connection in either OS.

THANK YOU!! I looked everywhere to get this to work, I tried bridging the connections, but that flopped. I didn't think of doing it this way. Thanks for saving me hours of trolling through the internet!

Hi, I'm running Ubuntu in my BBB and there is no /usr/bin/g-ether-load.sh in Ubuntu, could you help me?

Alex Schimp October 25, 2014 at 1:35 PM

I'm running Debian on my BBB and I didn't find the /usr/bin/g-ether-load.sh file either. I was able to get it to work by editing the /opt/scripts/boot/am335x_evm.sh file.

Look for the following lines towards the bottom of that file:

```
/sbin/ifconfig usb0 192.168.7.2 netmask 255.255.255.252
/usr/sbin/udhcpd -S /etc/udhcpd.conf
```

Immediately after those lines, add the following line:

```
/sbin/route add default gw 192.168.7.1
```

That worked for me.

Discovered this little type and was easy to solve, Otherwise thanks a lot for the post, just hope it really sticks because I don't have time to do this all the time.

```
root@beaglebone:~# /usr/sbin/udhcpd -f -s /etc/udhcpd.conf
/usr/sbin/udhcpd: invalid option -- 's'
BusyBox v1.20.2 (2013-04-03 21:07:04 CEST) multi-call binary.
```

Usage: udhcpd [-fs] [CONFFILE]

```
root@beaglebone:~# /usr/sbin/udhcpd -fS /etc/udhcpd.conf
udhcpd (v1.20.2) started
```

I want to thank Sara here, she has won my business and I'll be posting my experience to you and others.

My old computer crashed days ago. I had to buy a new computer. It costed me much.

My budget was not much. To purchase a windows 7 product key from MS was not enough. Then I went to Tomshardware, and one guy recommended WindowsKeysale.com to me. Their price did attract me. So I decided to try after several emails to Sara. She was very patient and answered clearly to all my questions. I received the key immediately after I sent 35 bucks. It worked perfectly. I was very very satisfied.

I'll be buying from WindowsKeysale.com from now on as well.
